

Assignment 2 – week 2

1. Quality Criteria

Institutional Authority: The source must be published by a highly credible company, a recognized academic institution, or an official international organization (e.g., OECD, EU Commission).

Thematic & Geographic Relevance: The document must explicitly analyze strategic competition, technological sovereignty, or AI regulation, covering at least two of the three specified actors (United States, China, Europe) to capture geopolitical dynamics.

Timeliness: Due to the rapid evolution of AI technology and international policy, sources must be published between **2024 and 2026**.

Methodological Transparency: The report must include clear citations, rely on verifiable data and avoid purely speculative or corporate-marketing narratives.

2. Search Strategy

Where we Searched: Standard Google Search (google.com).

How we Searched: The exact query used: "geopolitics of AI" USA China Europe report

Filters Applied: I used the Google "Tools" feature below the search bar to set a custom time range to 2024–2026.

3. Using AI

Once the 2–3 highest-quality reports are selected, we will use an LLM (e.g., Gemini or Claude) to conduct the initial analysis. To maintain accuracy and prevent hallucinations, the AI is constrained by strict prompt strategy.

"Act as an international relations analyst. Read the provided policy report [insert text/PDF] regarding the geopolitics of AI. Analyze the text strictly based on the following three criteria:

- 1. Identify the specific strategic positions, regulatory approaches, or policy actions of the US, China, and Europe as described in the text.*

2. *List the primary technological, economic, or security risks the report highlights regarding the AI race.*
3. *Identify the methodology or primary data sources the authors used to build their conclusions.*

We asked different AI to write as an example for specific prompt.
